- ✘ The exploratory factor analysis led to the removal of four indicators (Q2.22, Q2.25, Q2.26, Q2.29).
- ✘ Initially, two indicators (Q3.1, Q3.2) were added for brand-self connection and brand prominence, to increase the degree of freedom for the purpose of improving root mean square error of approximation (RMSEA) in the second-order factor analysis models of brand attachment, but eventually they were removed because the first-order models were used.
- ✘ Questions in parentheses in Q3.3, Q3.4, Q3.5, and Q3.7 are shown for reference as used in Park, MacInnis, Priester, Eisingerich and Iacobucci (2010)
